Subject: SB800- please support!

The concept of SB800 *with* it's amendments are desperately needed in this state. My name is Eron King and I'm one of the original urine samples that spawned the Hwy 36 State Exposure Investigation. Only because the State asked for the records did we finally get them, *after a year* went by. If it had only been us citizens asking for those records, I truly believe we would not have seen them at all.

It's essential that people are able to get ahold of those records in a timely manner. How are physicians supposed to diagnose their patients if they can't find out what they were exposed to? This dilemma happens all the time. My own doctor was reluctant to link my malady with pesticides exposure because there is no history there. When I was finally shown to be exposed to atrazine and 2,4-D, my doctor called me up and apologized!!

I fully support a pesticides reporting system that is complete. It includes State, public, and *private* forestry operations!!! If this is the intent of SB800, then I ask you all to support this! In order to make this bill stronger, I feel coming to the people who elected you, would be a good first step to more support. Neither one of you came and asked us, "what do you want?" You aren't going through the nightmare that we are. Private timber is running amuck in our state and the government is running coward when it comes to regulating them. This *must stop!!!* The citizens in rural Oregon are being poisoned, this bill isn't going to stop that, but it is a good first step to proving we are being exposed to forestry pesticides!!

Thank you.
Eron King
