Subject: canola in Willamette Valley

Dear Beth Patrino,,,if you have any influence with regard to whether canola is approved to plant in the Willamette Valley (or anywhere) I humbly ask that you withhold approval. Genetically modified canola has many destructive things that come with it,,,not to mention the fact that genetically modified food is not fit for man nor beast! Wild animals will NOT eat GM corn. GM foods are destructive and debilitating ending with strange diseases and death. Do NOT approve the planting of them please!

Sincerely,,Peter Kowalke Eugene Oregon
