

The high cost of medication-related problems

- One third of all patients are taking five or more prescriptions.
- Patients with chronic illness account for 75% percent of all U.S. healthcare costs.
- The United States spends \$200 billion a year dealing with drug therapy problems:
 - ineffective or unnecessary drugs
 - improper dosage
 - adverse drug reactions (ADEs)
 - poor adherence

- Nationally, at least 1.5 million preventable ADEs occur, costing \$887 million annually—almost \$2000 per event.

Clinical pharmacy services reduces costs and improves care

- The 2011 Surgeon General's report on advanced pharmacy practice found an overall average benefit of \$10.07 for each dollar invested in CPS.
- The Patient-Centered Primary Care Collaborative indicates the Return on Investment (ROI) for medication management (*including reduction in hospital admissions, use of unnecessary or inappropriate medications, emergency room admissions, and overall physician visits*) is as high as 12:1, with an average of 3:1 to 5:1.

What providers are saying about CPS

"I strongly support the role of a clinical pharmacist within the primary care medical home model.... Their knowledge of medications and patient education ability has augmented the skillset of the physician and demonstrated improved outcomes, reduction in adverse events, and cost savings.... Including pharmacists [in CCO development] would have a highly beneficial effect on access, outcomes, and cost."

Melinda Muller, MD, FACP
Clinical Vice President, Primary Care
Legacy Medical Group

"Adding a CPS program has helped us provide better care to some of our most vulnerable patients. The risk of adverse drug events has declined and medication adherence has increased. This program has freed provider time for diagnosis and treatment of more patients. Pharmacists have become invaluable members of the care team."

Charlene Clark, MD, Medical Director
Community Health Centers of
Benton and Linn Counties

Clinical Pharmacy Services

Pharmacists improving quality and lowering the cost of health care for Oregonians

An educational message from Acumentra Health and the Oregon Pharmacy Coalition.
