

Dear Senator Bates,

I am adamantly opposed to the passage of SB 633 and urge you to vote against this bill!

While I understand there may be some issues that may need to be controlled on a state level, local control of our agriculture is essential to protect and support our local economy. Passage of bills on the state level to pre-empt local control of agriculture is clearly a move on the part of the big chemical companies now involved in the bio-tech industry that are attempting to take total control of the food supply.

These chemical/bio-tech companies are taking control of many government decisions on state and federal level, and 'we the people' are being pre-empted by this control.

For the health of people + the health of our economy, PLEASE vote against this bill.
