

I am so disappointed to learn that the hearing for HB3470 is not scheduled, it has been postponed several times and languishes. Why are we not part of the solution to reduce GHG?

To me this demonstrates a lack of foresight for developing action for the future of our children. Why are we continuing to spend billions of dollars in surrounding states for energy, when we could keep these billions in the state and create jobs and reduce our carbon footprint?

Think of the pluses of HB 3470

- \*targets GHG as approved by the Oregon legislature in 2007

- \*this approach is economically feasible-it is not pie-in-the-sky, it has been tested

- \*it hits the bulls-eye-the **full life cycle** of greenhouse gas emissions

- \*will keep up with current scientific knowledge and technology

- \*takes into consideration that some folks may be unjustly harmed by HB 3470

This is a winner for the inhabitants of OREGON! We cannot delay, why delay, truly we must take action.

Embrace the thoughts of future Oregonians. Even China is taking positive steps and will achieve their goals years ahead of what they scheduled.
