

9 1 1

What is Your Emergency

Perhaps this is the first 911 call known to man

**"It Blundering Bear! Him say,
'Call fire department!'"**

403.100 Policy; development of public safety networks and emergency communications system. It is the policy of the State of Oregon to:

(1) Encourage and support the development of public safety networks and an emergency communications system and the rapid deployment of broadband or other communications services in areas of the state in which the services do not exist;

All these calls for help went to 911 Using these technologies

- Telephone

- Different types of Cellular Phones

Or These Technologies

- Voice Over Internet

- Or today's modern cell phone

We Made A Promise

- The emergency communications system must provide:
 - **(a)** Interconnectivity between public safety answering points and interconnectivity with providers of the same or similar emergency response services nationally;
 - **(b)** The capability, within each primary public safety answering point, to receive all emergency calls placed locally within each 9-1-1 service area; **and**
 - **(c)** The automatic location identification accurately portraying the location from which each emergency call originates. [Formerly [401.720](#); 2015 c.247 §8; 2015 c.736 §56]

Cash-strapped states raid 911 funds by the Associated Press

We are not the only state that has swept these funds.

Many have. More than \$200 M has been swept throughout the US in the last 2 years. This article was written in 2009.

Do we break our “promise” when we sweep money from 911

The promise is “the capability to receive all emergency calls”

If we cannot pay for the newest of technologies because we have swept these funds, I believe we have broken our promise

We are in a Communication Revolution

Next Generation Technologies

- The objective of NG 911 is to keep up with the consumer digital revolution and allow people to use all the digital tools they have available now to request assistance from first responders.
- Video from static pre-positioned cameras
- Video attached to police cars and officers
- Map based apps
- Crowd sourced images and videos
- Automatic notification on air-bag deployment

PLEASE SUPPORT SB 661

- We already have put the interest from this account into the GF
- Future legislators can change this bill, but we should be the leaders in showing the importance of preventing sweeps of this fund.

- Can we, as legislators, prevent someone from reporting an emergency because of outdated equipment?
- Preventing sweeps is truly a matter of life or death.

I owe my life to 911
