

Dear Legislatures,

I work at NUNM as a naturopathic medical student and we provide basic health services to the community such as vaccinations, medication management, and general check-ups.

Often my patients ask to see a manufacturer's package insert for the vaccines they are receiving that day and it is very time consuming to continually print this out for them or teach them where they can gather this information online.

Please support SB 649 so that my medical team and I can provide vaccine information in an easy way for our patients so that we can make better use of our time and see more patients in a day!

Thank you for your consideration,
Anaheed Jackson
