

Regarding the possibility of mandatory vaccinations:

Please, I urge you to step back and look at the big picture.

Should we allow an industry run by profit, with immense room for human error, have so much control over our children's bodies? 4 billion has been paid out by vaccine injury cases, which means THEY CAN HARM CHILDREN. Most of these "diseases" are simply natural childhood illnesses that have been proven to strengthen the immune system later in life.

How can human's have possibly gone so far off track? We evolved for 4 billion years perfectly fine without vaccines. There have been a few dark spots in our history, when sanitation was so poor it became toxic, and when war chemicals were introduced as pesticides, and yes in those cases, many people did die. But it is much better to get to the root of any problem then just put a band aid on it. Let's instead put our energy into healing the planet, so that our children can actually have a healthy future.

It's fine if people want to give their children vaccines, but how can you force someone to do it, when there is overwhelming evidence that shows how harmful and/or ineffective they can be?
I feel that it is a human right to choose what gets injected into our children.

Absolutely NO on Mandatory Vaccinations.

If a bill like this was to pass, I assure you many of the amazing artists, healers, and free spirits that make Oregon special, will be on their way out.

Thank You.

Sally Sherwood
