

To whom it may concern:

This situation is tremendously stressful to consider and when I try to review the pros and cons of the information it's gets overwhelming very quickly.

I'm against the removal of non medical exemptions. Fundamentally it's incredibly inconsiderate and preposterous because it does not allow for any nuance regarding the application of vaccines. A one size fits all approach to vaccines amounts to an ethical blunder.

This bill is a complete disregard for other confounding factors related to potential dangers and pitfalls that parents want to avoid related to vaccine harm. Genetics, diet, lifestyle, habits, etc. This bill also would not allow for alternative inoculation schedules for parents that want to vaccinate their children.

Thank you  
PJ Torres
