

Chair Prozanski and Members of the Committee,

Oregon Farm Bureau writes in opposition to SB 723. As you are aware, predator management is critical to livestock operations across the state. Predators, such as cougars, coyotes, bears, and most recently, wolves, can have a significant impact on livestock producers, injuring and killing hundreds of sheep, cattle (particularly calves), and other livestock every year. While SB 723 does not impact a landowner's ability to manage predators on their own land, we believe that it is important for the state to maintain all the tools available to it to manage predators.

Many predators, such as coyotes, are not particularly valuable food sources for hunters, though their fur can often be utilized in clothing. This means that landowners and communities may require other incentives to achieve the level of predator management needed to protect their operations and ensure that populations of key predators don't reach unsustainable levels. Hunting contests are one method of incentivizing needed predator management. While we understand that contests may seem unnecessary for predator management, they incentivize predator control without resorting to options that can cost the state additional money, like a bounty on overabundant predators.

We understand that there are amendments to this bill to specifically target coyote hunting contests. Coyotes are one of the top predator threats to calves, sheep and other livestock around the state. Coyotes are a habitat generalist, meaning that they are incredibly adaptive to a variety of habitats, resulting in their statewide abundance. At a very conservative estimate, we understand that there are at least 300,000 coyotes statewide. As such, ODFW does not regulate their take beyond requiring a hunting license.

In order to incentivize predator management in an area where coyotes kill numerous calves annually, Harney County Farm Bureau and the Young Farmers and Ranchers, both affiliates of Oregon Farm Bureau, organized a coyote hunting contest in late 2018. The hunt was conducted solely on private property of willing landowners and complied with all applicable laws and regulations, and was consistent with state wildlife management objectives. This hunt helped reduce the predator population in an area where we have already had ranchers experience predator loss this year.

We believe that the state should retain all available tools to help manage predator populations, especially for predators like coyotes, who are so abundant on the landscape. As such, we encourage you to oppose SB 723.
