

I am gravely disappointed that anyone would choose to go against the very thing that our great nation stands for: FREEDOM.

I DO NOT and will NEVER agree with HB 3063. Not only are vaccines full of poisons that can cause severe damage to a child, even kill them, but think of the tax dollars you will lose when people start homeschooling or leaving the state.

Exemption is not a loophole that parents choose because we are lazy. We are not negligent. We are quite the opposite. We have educated ourselves and have made informed decisions knowing what is best for the health of our children. I can't even speak for those who have vaccine injured children, and especially not for those whose children are dead.

Has the choice to propose this informed? Have you watched and read countless hours of information from BOTH sides? Or have our very own representatives fallen prey to inaccurate reports? Or maybe to the demands of those who are afraid? Or are they a part of the big Pharma who not only make billions of dollars off of these vaccines, but also on the thousands of sick children who because of these shots now have to stay medicated for the rest of their lives?

I sincerely hope you rethink this decision and research these deadly injections. And then think about what FREEDOM means. Are you actually going to protect ours?

Disappointed,
