

I Rebekah Joers oppose to the HB 3063.

MY BODY! MY RIGHT! Taking away our rights to choose what we put into our bodies and our childrens is absolutely pure evil and unconstitutional! I do not consent! More people die from the vaccines then the illness! 1 in 10,000 people have died from the measles this year and 400 have died from the MMR vaccine! That is a true state of emergency! The measles is a benign illness! I am vaccinated and so are my children however it should be a choice! After my daughter recieved her MMR she became ill and regressed and from then on is allergic to everything. It has made our lives so difficult and challenging not to mention expensive trying to feed her. Mercury, aborted baby kidneys, animal dna, food coloring should not be put in vaccines! If you want people to be vaccinated then come up with clean ingredients! No long term studies have been done to prove that they are safe. Why would they even think to put this garbage in our bodies and why do people stupidly not care to even question!? Cancer, auto immune disease, autism and other illnesses have never been higher. Doesn't take much to figure out why!
