

To my Oregon Representatives,

My name is Randee Phillips, I have a vaccinated 3 month old son, and I am writing to ask you stop HB3063.

Whether you believe in vaccines or not, the choice to vaccinate should be left to the parents/guardians of every child, not the state or federal government. All parents want the best for their children and there are many choices you must make as parents for the safety of your babies, including informed consent. In this case that means knowing the benefits and risks of vaccines as listed, but not limited to, the CDC website, the vaccine inserts, and VAERS (the checks and balance type reporting system for vaccine injuries). By taking away non-medical exemptions you are setting a dangerous precedent that the State can choose how to raise our children, with zero accountability. By taking away parents rights to choose, you are condoning and encouraging medical rape by forcing a substance into children against the wishes of their parents/guardians. Who will be blamed when a forced-vaccinated child has an adverse reaction, resulting anywhere between long term health issues to that child's death? Will YOU face the parents? Its doubtful. Can YOU bring their healthy child back to them after your bill caused the illness or death? No. Should you be to blame if you allow this bill to proceed? YES.

Please, please, consider the freedom you are revoking with this bill. I have never been so appalled at the blatant disregard that my Representatives have for me and every parent in this state. Oregon should be leading the way for progress, not taking rights away. This bill is taking 10 giant steps in the wrong direction. Please, stop HB3063.

Randee Phillips
