

Please Vote No on HB3063

My name is Will Wilkinson and I live in Ashland, Oregon with my wife. Please demonstrate real leadership and oppose HB3063 to help preserve Oregon's unlimited access to public education by allowing parents to choose their own health practices.

I can remember when Big Pharma didn't have so much power, when they weren't running so many ads on television, advising doctors on how to treat their patients, and weren't lobbying politicians to influence their votes.

I had measles and mumps when I was a kid. We all did. And we all grew up strong, naturally immunized by those outbreaks. So, what's with the hysteria regarding the "measles epidemic"? There isn't one. Big Pharma is heartlessly trying to enroll the government to help blackmail parents into forcing their children to submit to being vaccinated... in order to go to school!

What's next?

Minus any liability, vaccines have become a huge money maker for Big Pharma. BTW, we only had a few vaccines when I was growing up. Now there are over 70 recommended injections. Are we healthier because of this? You know the answer to that and if you read JB Handley's book "How to End the Autism Epidemic" you will learn about the science behind vaccines. This is not hysteria, it is science and the cautionary principle which is being ignored.

Please vote no on HB3063.
