Reasons Why we should have the choice to vaccinate:

My name is Betty Jean Knofler, I live in Dallas OR

Please do not discriminate and take away our rights because we are a minority. As individuals we have different physical make-up and to make decisions with our care provides for the best medical care needed. We are not cattle needing the government to round us up and put us in a shoot and vaccinate at their will. Our religious, intellectual, and medical freedom is at risk with Bill HB-3063.

The government does not hold the companies accountable for what they manufacture. Childhood Vaccine Injury Act 1986 Pharmaceutical manufacturers were freed of all liability resulting in vaccine injury and death.

We are the richest and most developed country in the world, yet we have the sickest childhood population. The rate of neurological and autoimmune issues (like autism, speech delays, developmental disabilities, epilepsy, asthma, food allergies, eczema, childhood arthritis, diabetes, and leukemia) are skyrocketing right along with the vaccines.

When there is no accountability for what companies produce there is no safety. I have worked in the medical field for 40 years. We are required to have water systems in Dialysis facilities, regulated by the government agencies, to take out the metals and minerals in our water for patient safety.   Yet vaccines have those same metals, going in our babies and elderly with no regard to the damage being done and no consequences. The flu vaccine alone contains 24mcgs more Mercury than the US Environmental Protection Agency exposure limit allows. Mercury causes neurological damage, once the exposure happens it stays for a lifetime.

My nephew was a vaccine injured infant, and now as a grandmother I set in the classrooms of my grandchildren and my heart aches as I see more and more vaccine injuries in more and more children being coerced and now possibly forced by a government. Please do not away our rights and freedom to care for and protect our children, our elderly and ourselves.
