

I am against HB 3063 because it forces parents to accept immunizations for their children that they may not believe are in their best interest.

The safety of administering these drugs to our children may be questionable, against our religious beliefs, and forces us to go against those beliefs so our children can be educated. Some vaccines may use materials from aborted fetuses as well as contain such ingredients as mercury and formaldehyde. And more vaccines are being developed all the time! Passing this bill could turn out to be a never ending cash cow for pharmaceutical companies.
