

Hello

,

My name is Michelle Fisher. I have been a Mother for 19 years and I am writing today to share my personal testimony in opposition of HB3063.

As a child growing up I myself was fully vaccinated although back then the vaccine schedule looked way different. When I became a parent myself I followed Doctor's orders and began regularly vaccinating my Son as well who was born with a medical defect and at this point was diagnosed with kidney disease. I was advised by Doctor's the vaccines would have no ill effect so I continued through his childhood. By a young age my Son was diagnosed with eczema and asthma on top of his kidney disease. Next my Son began to endure excruciating kidney pain soon after every round of vaccines. We tried to discuss our concerns with Doctor's on his team but they continued to deny any correlation. Our Son was missing out on a lot of his childhood by this point. The pain would drop him to the ground, last for weeks and there was nothing we could do for him. Doctors continued to say they had no idea what it was and eventually performed a surgery on him just to see if it would stop. It did not!

We kept our faith in his team of Doctor's though and continued all of their recommendations. That is until my Son received his first dose of the three shot series Gardasil 9 (HPV) and was quickly sent into end stage kidney failure. After that we knew something was terribly wrong with this picture and I began my research into vaccines, ingredients, side effects, trial studies and soon learned the system is very flawed. The amount of aluminum alone that was being pumped into my compromised child was enough for me to feel unsafe continuing with vaccination.

It has been over 5 years now since his last vaccine. Not long after beginning his detox did he stop experiencing the kidney pain and soon after that his eczema began clearing up. In less than a year he completely stopped having asthma attacks and has not used an inhaler since. Unfortunately he is still in end stage kidney failure with about 15-18% function left but he will tell you himself this is the best he has ever felt. He gets up every day with a positive attitude and pushes towards his future. He deserves a free, appropriate, public education without having to put his body in harms way for it. What if the next shot he receives is the final straw for his kidneys?

My Son does not fall under Oregon requirements for a medical exemption. Truth is these medical exemptions do not cover the majority of our vulnerable children. Please listen as we are not just parents who are basing our decisions off of hypothetical situations. We are parents who have watched our children be directly effected and we are concerned for their safety and well-being. Why are the children who are already harmed any less important than those who have not? More importantly no parent should ever be forced into a procedure where the

manufacturer hold zero liability of harm. Where there is risk there must be a choice which is why I ask you to oppose bill HB3063 and continue to allow EVERY child a free, appropriate, public education.

Thank you for your time and consideration,

Michelle Fisher
