

## OPPOSE HB3063- Valerie Baasel

I have a grandchild born with a near perfect APGAR. By 4 years of age and following the vax schedule developments of headbanging , a drifting eye. failure to thrive, refusal to eat, auto immune, worsening health, rounds of antibiotics... A switch to an honest, ethical and knowledgeable Dr. said to STOP the vaccines. We started researching- and were horrified by the toxic adjuvants and side effects, printed on the vaccine inserts.

It was then that we realized the source of her mothers multiple, chronic health issues from infancy. MTHFR- the bodies inability to clear from toxins. More was revealed- no safety testing has been done on vaccines for 32 years. See Case1:18-cv-03215-JMF. ( Robert Kennedy Jr. and I Can against HHS) This case exposes the mantra of The Science is settled, Vaccines are safe and effective. I am not an anti-vaxxer. I am for Safety in what is injected. The irreversible consequences fall on the innocent with no liability to Big Pharma. Show us the true Science- not just repeating the Mantra. My concern is this will open up the floodgates to even more- See 2/27/19 CDC in Atlanta Georgia votes on new vaccines- Japanese Encephalitis, Anthrax, the 6 in 1 for infants ... Don't just accept and blindly follow. Do the Research!!! It was uplifting to see the hundreds who came to be heard yesterday. Thank you Chair Salinas and Health Care Committee
