

A safe vaccination is more important than just having one. 72 vaccinations with little studies of long term affects, no tracking of side effects and no recourse is dangerous! Many of these are completely unnecessary! A child under the age of two is not developed enough to process the toxins and immune responses. My son stopped talking within two days of his MMR because his body couldn't flush the toxins. I won't risk his safety for unnecessary vaccines like HPV and anthrax. With so many screaming about the evils of the corrupt and greedy big pharma, I don't understand why the belief that vaccines are completely safe? How many of their drugs won't you take because the list of side effects look like a bad SNL skit? Such outrageous disregard for safety of our most precious resource, why??? Is big pharma so powerful? Whose campaign do they need to fund to get people to overlook common sense and practical safety?

The FDA acknowledges that vaccines contain retroviruses such as cancer. If this passes and my son is forced to have 72 vaccines to go to PCC he won't go. Even though he has autism my hope is that he can get an education and support himself rather than go on disability but not if it's going to cost him any more. Please say no to this bill.
