

Mike Brinkley <mbrinkle@comcast.net>

I am writing to encourage passage of HB2656. This bill will change destructive timber harvest practices that pollute and poison our water supply. The practice of clearcutting in watersheds causes problems such as sediment and warming of the water in streams and reservoirs. Subsequent applications of pesticides kills aquatic life and requires treatment to make the water potable. These problems will be addressed by HB2656. Please support this critical clean water legislation.
