

With reference to the public health bill HB3063, I question the true scientific proof of the effectiveness of preventative vaccines. As a medical professional, I took the flu vaccine two years in a row and each time I came down with severe flu symptoms and then I opted out of the treatment for 4 years with out any flu-like symptoms. There does not seem to be any recourse against the pharmaceutical industry for errors and the negative reactions that occurs with there products. I found that these products contain controversial toxic chemicals and other additives that have not been studied as to their effect on our human body. I urge you to look closely at these issue and not be persuaded by the pharmaceutical lobby.

Respectfully, Frederick G. Smith, MA, RPT
