

Craig Mackie <beachbum@nehalem.tel.net>

It is time to change our forestry laws so that the safety of our citizens is taken into account. Too many people are being exposed to the harsh chemicals that are sprayed on clearcuts and too many watersheds are being logged and sprayed putting chemicals into people's drinking water. There are plenty of trees in our forests for the logging companies to harvest. If they are getting to the place where they have to log our watersheds, then it is time to cut back on their profits so that the citizens of this state are protected and remain healthy!
