

No on HB 3063

This bill removes my parental right to decline government mandated immunizations for my child. This is not the states job.

I will have the sole responsibility of caring for my children who may have a negative reaction. Yet the state and Pharma companies bear no responsibility for that injury or damage that could be caused by such a forced immunization.

This will be a significant negative impact on my family. It will create hostility and could force many Oregon families underground. I would choose to not take my children to the doctor rather than be subjecting my kids to a harmful chemical. These immunizations given mostly in combination cocktails, not in single doses, do not have enough evidence that they don't cause harm. Having been around the "drug study" industry it is subjective. The lead Dr.s and researchers choose what is "caused" by the drug and what could have been pre-existing.

Oregon has a better track record of protecting animals than people. You would not choose to over vaccinate a dog and you want to force me to use averages based on the population not my individual child. This bill essentially puts a target on un-vaccinated home school children.

The alarming amount of nearly 75 vaccinations are required for our children by the time they reach 18 and some have NO proven efficacy rates. Who manufactures the medicine?

The moral decline in our society has caused much of the need for these new vaccinations. The Hepatitis A, B, C vaccinations...it used to be uncommon! HPV vaccination only helps for SOME kids who are actively having sex and passing along an STD!

The government has no authority to require me to inject a foreign substance into our bodies. ALL Doctors take an oath to do NO HARM.

How can this be justified under the Constitution!?

"There is no recourse, no safety data, and very few objective studies on vaccines. The 1986 vaccine injury compensation act prohibits directly suing vaccine manufacturers, and instead injured parties must file against the government. The vaccine court has paid out 4.5 Billion dollars of tax payer money to injured parties. There is no control where there is no liability. OHA keeps pushing for vaccine uptake, and now the "baby on board" bill has a nurse come to the home of home birth families to discuss and administer vaccines, under threat of a DHS call." -OCL

This is total government overreach! Such irony that abortion is on demand, "My body my choice", oh except for vaccinations.....ridiculous.

Don't punish parents who actually Parent...there are so few of us left!
