

Dear leaders,

I don't fully understand how Gardasil/HPV is being added to the childhood vaccination schedule through HB 3063. This is terrifying to me. This vaccine has caused demonstrable harm. The documentary "Sacrificial Virgins" about this vaccine won the watchdog film festival in 2016. This vaccine is currently under active litigation for fraud in Merck's clinical trials, please read more about that here.

<https://childrenshealthdefense.org/news/court-hears-gardasil-science-and-moves-forward/>

How can you make our kids get a vaccine under current litigation for harm and fraud? Shouldn't you wait until it's decided? Do you understand there is no herd immunity for cervical cancer? Good grief.

Also, it is decidedly against my religion to accept vaccines that contain human DNA.

Please vote no until more work and study is done on this complicated issue! I'll volunteer for a task force!

Sincerely,
Sandra Ganey
