To the Oregon Legislature,

On behalf of myself, my family, my patients, and the future of our generations I am writing this letter to OPPOSE HB3063.

As a Holistic Healthcare practitioner who works with all ages and has a strong background in Research and Western Biomedicine it is NOT evident that all vaccinations are equal in their performance and legitimacy. Titers in each individual fluctuate based on their genetic and metabolic capacity. Timing of these vaccinations varies in agreement for administration and certain subsets of the medical population are at higher risk for negative outcomes upon receiving certain vaccinations and the substrate they are administered with.

As an individual who believes in human rights to choose for ourselves and our offspring, mandating vaccinations without any opt out reasonability is completely unacceptable and overreaching as an act of government. The government cannot prove that these mandates will protect “the people” to the degree that is necessary to justify such a decision. People come into contact with others every day regardless of institutions that place them in one setting. This alone is an opportunity for risk. People have varying beliefs about life and death and their own will to experience quality of life. Bills like this open up a doorway for big pharma to push through other chemicals into the bodies of our young before they have had the opportunity to build their own reserves of immunity and resilience. Using education as a doorway to push this agenda is unacceptable. We are all bombarded by many forms of pollution every day on a chemical level. Is there going to be a mandatory vaccine that protects us from the pollution we face in our environment? This is not the answer. The amount of vaccinations on the list to be required is atrocious.

If you care about the future of our generations and seek to uphold the proper place of government in protection of its peoples rights. Then you will NOT pass this bill.

Sincerely,
Julie Hightman LAc, LMT
