

STOP HB 3063

Hello, My name is Rebecca Silebi and I am writing to implore you to oppose HB 3063 which would be an infringement on the rights of parents to obtain a philosophical or religious objection to vaccination.

I personally have been injured from a vaccine and ended up in the hospital. My children have also displayed vaccine related reactions from their childhood shots. I stopped vaccinating after seeing the negative side effects the vaccines had on them.

It is extremely hard to qualify for a medical exemption and we would be forced to leave the school we absolutely love and my children are greatly benefiting from because of this bill! I have to make the decision to vaccinate my children, knowing full well that they have already been injured before and will very likely have bad reactions again, or take them out of the school they love and are thriving in and home school them in order for them to get an education. This would be a hardship financially and emotionally. It is a very unfair infringement on our rights to make our own medical choices without coercion.

Furthermore, I am opposed to the toxic ingredients in the vaccines and especially the use of aborted fetal tissue to culture and make vaccines. That is unethical and against my personal and religious beliefs. To try and force me to go against my beliefs and convictions is truly un-American.

It is terrifying that vaccine makers and healthcare providers who give vaccines have no liability for the injuries or deaths. This is a horrible policy and any other product with this set up would be a huge violation. Vaccine makers have no incentive to make vaccines safe and with the vaccine schedule exploding with more and more vaccines, doses and boosters, we are subjecting our children to a very poor standard of health care when these have not been properly tested against a true placebo or tested for carcinogenic or reproductive harm.

This is a very slippery slope to try to take away parents' rights, and really human rights, because if these mandates keep happening, soon you yourself will be faced without the choice to make your own healthcare decisions. What if you decide you do not want a certain vaccine that you know you have a reaction to? Would you want that choice to decide to not get it? Don't be fooled. Medical exemptions are extremely hard to obtain. It is really unfair to try to continue to make it harder for people to obtain exemptions. When there is a possibility of harm or death, then a person must always have the choice (informed consent).

I urge you to stop HB 3063!!!

Thank you for your time,

Sincerely,

Rebecca Silebi
