To: House Committee on Energy and Environment; **Representatives** Noble; Post; **Senator:** Thatcher

Re: [HB 2856]: I SUPPORT this great and overdue legislation!

Representative Helm (and the good folks on HCE&E) have hit one "out of the park" with this legislative milestone to protect the most valuable resource we have- No, not Oregon legislators- precious groundwater.

Since other testimonies will shower additional praise upon yourselves, this testimony will be focused on providing ideas for additional long-term funding sources.

First, you must construct a formidable "RESTRICTED USE FUND" to FUND this program and to keep the morons that are unfortunately in your midst from trying to raid this FUND to pay for, let's say, sex-change operations for illegal aliens which may sound far-fetched but, when one reads **[HB 2003]** all bets-are-off when it comes to the legislative adventures of space cadets Rep. Kotex and Rep. Keny-Guyer.

Additional "mandatory-non-waivable" funding sources to be deposited in the "RESTRICTED USE FUND" could come from a wide-range of sources, a few examples are; system development charges attached to all construction projects, water utilities, utilities that use large volumes of water and et cetera. Leave property taxes alone!

It would be prudent to hold discussions with the Department of Revenue and all relevant Senate and House Committees to establish and carry out; "mandatory-non-waivable" funding sources, FUND management and performance and financial audits. Discussions with [Oregon State's and University of Oregon's]: Chemistry, Microbiology, Biology, Forest, Engineering Departments (and other Oregon Universities including high-schools) for inclusion in "state-wide laboratory testing" to support and make improvements to establish an analytically comprehensive monitoring program.

If you construct the **[HB 2856]** program efficiently and thoroughly, it not only will protect and stabilize groundwater supplies but, it will initiate a renaissance in; [water testing; hydrology, geology, engineering, biological and other related] technologies which will stimulate Oregon's economy while slowing Oregon's descension and conversion into California del Norté. (Legislating Urban Growth Boundary (UGB) expansions to accommodate; no income, very low income, low income, inclusionary housing and other pernicious, predatory "housing and utility developments" occurring in rural areas is bad enough **[HB 4006, HB 2003]**; when all other detrimental "land-use decisions" which also expands UGBs are combined, the results are; merciless and unabated attacks upon Oregon's priceless and irreplaceable farm lands and dooms Oregon to be the northern slum of California in perpetuity, while systematically and irreversibly destroying Oregon's agricultural economy and heritage as a mere "by-product" of the degenerative legislative conduct of the accursed socialist's manifesto.)

You have a chance to achieve political immortality and set Oregon above all other "sanctuary states" in the "New Confederacy" by passage of **[HB 2856]** if you construct this legislation using the skeletal framework referenced and incorporated herein.

Respectfully submitted,
/s/ David S. Wall
