

To the Oregon legislature

I am writing this comment in Opposition to HB2020

It has been 40 plus years that I have been hearing about Global warming. All the predictions from the late 80s that the polar ice cap was going to melt away and the ocean waters were going rise and massive lives were going to be lost or be misplaced.

In the 90s the environmentalist come up with a new scam and changed it to global cooling because their first scam didn't work out.

Now we are coming up with a new scam it is called global change . Which one is it cooling or warming? Please answer.

I grew up in Southern Oregon in 70s and all the lumber mills were running 24hrs a day .The air quality was terrible here because all the mills were using the wigwam burners. I agree with the removal of them.

The orchards were using smudge pots to protect their fruit crops. I believe in the removal of them as well.

Two of the biggest polluters in the valley changed their business practices to improve the environment.

The transit system, the trash pickup, mills, and orchardist, deleted the use of diesel and went with natural gas because that was the proper way to please the environmentalist.

Now natural gas is evil because you say so.

Who made you the legislatures a scientist on global anything? I checked and I saw no Phds on the panel?

Now that I am talking about science, you all say the computer models say this is going to happen if we don't do something about it.

Anybody can put data in a computer and come up with whatever they want the computer to say. Proof? ask Google

Now about the green deal here in Southern Oregon there has been a couple of solar farms put in. One is on some of the finest fertile soil to grow food on. The other one is on the Roxy Ann Elk herd winter bedding grounds. I don't recall an environmental study being done (I could be wrong).

Solar panels and lithium batteries are hazardous to the environment. How and where are you going to dispose of them safely?

Lithium batteries also have a history of exploding and causing fires and bodily injuries . Maybe a public safety issue?

I do believe the devastating Paradise Fire was started at a lithium battery storage facility.

Just this year the windmill farms in the polar freeze used more energy than they could produce

The solar panels could not produce energy

The state Of Oregon has shut down the Boardman power plant that supplies a lot of power for the State

The State of Oregon has claimed hydro electricity not renewable (what a crock)

The State of Oregon Doesn't allow nuclear power

Just where is this power going to magically appear from to charge all these cars, the G5 internet, the businesses and the tourist industry, which want to be our #1 economy? Please answer.

Now I will mention the Environmentalist on the wild fire issue. They say climate change is the cause .(hogwash) I grew up here in Southern Oregon in the 70s as I mentioned before. We didn't have major fires like we do today. We had men working the forest, the land was not locked up, and the loggers were the first line of defense that was their lively hood.

In the 80s the environmentalist came up with scam about the infamous spotted owl. (that is factually true). So they started closing the forest down so the men could not work.

The forest fires are out of control because of govt. policies. Not climate change.

Taxes are going to hurt all Oregonians, on fuel, food, electricity, natural gas, clothing and everything else that that has to do with commerce.

The legislatures are proposing so many taxes on the Oregonians and stealing the kicker refund that the fixed income people wont have money to pay. The only people that are benefiting from all these taxes are public employees .

The public have no voice on the contracts that the govt. negotiates.

It is time that the legislatures start thinking of the citizens bright future instead of taxing them to death

HB2020 will not improve anything it will only hurt the citizens

Wish the politicians stop crying wolf and look out for the citizens

Been lied to to many times from both parties

Ron Savage
