Riegelmann
Period: 1

With my experience in computer science
I have only realized more and more about the
Poetentel in this class and future generations
to come.

Sincerely: Justin Riegelmann

I think the best part about computer science classes is how useful the skills we learn will be when we enter the workforce.

To me, the most satisfying part of computer science for me is when I finally find the small error that I made and everything works.

Computer science has encouraged me to pursue a career that I am really passionate about, and to go outside of my comfort zone.

I enjoy finishing a
challenging program &
watching / playing it.

Considering how fast computer technology is growing, this pathway is extremely beneficial to students future in expanding the field and its able to prepare students much better for college classes.

This class really helped me figure out what I wanted to be doing in the future (something with Computer Science). If this class wasn't offered in high school then I wouldn't have figured this out until college.

I'm very glad my high school has this set of classes because of this, and I think they should continue to be offered for others like me.

-Dominic M.

When I first started high school, I had no idea what I did, and I wasn't planning to take CS classes. By chance, I was placed in a computer game design class and, from there, I chose to delve deeper. Studying computer science has been one of the most important things I have done in high school, and I wish more people had the chance that I did. So often, we dismiss CS as a field for nerds — young, white men who play videogames and stay inside all day — but the truth is that we are living in a high-tech, computer-oriented world, and we all stand to benefit from understanding how our world works, no matter our individual background or identity. CS is so

Computer Science is something that I enjoy, because
it lets me really think to solve problems.

The most satisfying part about Computer Science in my opinion is being able to create a program that works and learning how it works.

Computer Science has given me countless opportunities to pursue in college and careers in the world that I think all high school students should have access to, especially in the future.

CS gave me a idea of how current technology works. Even at the time
class it gave me an understanding of what I wanted to master and take
into. Now doing 4 years it has helped me further expand my knowledge and
ability to problem solve

Computer Science has helped me
in many ways with learning and
practicing how to code. Not only that,
it has taught me a lot of valuable
information about computers and how
they work.

The computer science pathway has been amazing because we are learning to write codes to make simple programs. Also it helped me learn different types of computer languages that I can use to create codes.

This class has taught me want I want
In the future, and how to challenge myself
to finish.

Computer science courses are amazing for students like myself that want to have a hands-on, meaningful experience. Its ~~the~~ applications everywhere, not just in the computer science industry, makes it something every school should have and fund. With technology becoming a larger part of people's lives, it is necessary for students everywhere, including Oregon, to have a place to learn about it. Computer science should have funds dedicated to it that reflect its true value, and as an industry, it is one of the most valuable out there.
