---

I am writing to share my concern over SB413

The bill appears to be aimed at building a west side bypass. This type of facility has been shown multiple times, most notably through the LUTRAQ study to be harmful to the environment. It will generate additional vehicle trips through induced demand, threaten rural farming operations and increase the amount of carbon dioxide released into the atmosphere, accelerating climate change.

It would also conflict with goal 4 of the Oregon Highway Plan's direction to increase the use of non-auto travel modes by increasing the number of single occupant vehicle trips

I ask that the legislature dismiss this bill.

Thank you
