

Dear JCCR Committee Staff JCCR Committee Staff,

We need strong, decisive action to really make a difference. Such as:

1. tough targets. According to the science we need 20% reduction in greenhouse gas emissions by 2025, 55% by 2035, and 100% by 2050.
2. Free allowances must be minimized
3. No offsets allowed
4. NO exemptions or exclusions for major polluters
5. NO new fossil fuel infrastructure

The science is overwhelming. Will Oregon be a leader in making a just transition to a clean energy future? I hope you will do everything you can to say yes.

Sincerely,
Mollie Crowell
