

SB 1027 STAFF MEASURE SUMMARY

House Committee On Health Care

Prepared By: Oliver Droppers, LPRO Analyst

Meeting Dates: 5/14

WHAT THE MEASURE DOES:

Allows health care practitioners who receive a needlestick injury during the emergency treatment of a patient who is unconscious or otherwise unable to consent, to perform a blood draw on the patient to determine whether the patient is positive for human immunodeficiency virus (HIV) and determine any necessary resultant treatment for the practitioner. Specifies when blood draw is allowed. Requires anonymity and confidentiality of performed tests and results. Prohibits patient's health insurer from being charged for the cost of specified test. Takes effect on the 91st day following adjournment sine die.

REVENUE: No revenue impact.

FISCAL: No fiscal impact.

ISSUES DISCUSSED:

EFFECT OF AMENDMENT:

No amendment.

BACKGROUND:

Needlestick injuries are a common occupational hazard for health care workers that can result in exposure to infectious diseases such as hepatitis B, hepatitis C, and human immunodeficiency virus (HIV). The federal Needlestick Prevention and Safety Act (2001) modified the Occupational Health and Safety Administration's Bloodborne Pathogens Standard to specifically require employers to identify, evaluate, and implement safer medical devices, especially addressing occupational exposure to bloodborne pathogens from accidental sharps injuries in health care and other occupational settings.

Senate Bill 1027 allows health care practitioners who receive a needlestick injury in the emergency treatment of an unconscious patient to perform a blood draw on the patient to determine whether the patient is positive for human immunodeficiency virus and determine any necessary resultant treatment for the practitioner.

1st Chamber vote (Senate): Ayes, 29; Excused, 1.
