

To whom it may concern:

The Eugene City Council has previously opposed SB10 because it so completely usurped local planning and imposed unrealistic increases in allowable density across large areas of the City with no recognition of area specific conditions and situations. The amended version still covers enormous sections of Eugene including significant parts of the low density R1 zone. This serious over reach by the state government will have undeniably serious impacts the results of which are as yet not even understood. It would be extraordinarily irresponsible to move forward a bill with such damaging possibilities.

I urge you to vote for a DO NOT PASS recommendation on this bill.
