

The State of Learning Disabilities: Understanding the 1 in 5

Oregon State Snapshot

Nationwide,

12.2% of public school students received special education in 2013-2014.

25,931 children

were identified in 2015-2016 with **specific learning disabilities (SLD)** in Oregon, where they accounted for the largest of the 13 disability categories covered under special education law.

Children are often classified under the category of other health impairments (OHI) when ADHD is the primary reason they qualify for special education. OHI can cover other health conditions but is used here as a rough proxy for students receiving special education who have ADHD.

For more information about the challenges and opportunities for the 1 in 5 students with learning and attention issues, visit **ncld.org/stateofld**

Educational Environment

As detailed in this chart, many students receiving special education spend 80% or more of the school day in general education classrooms. Inclusion can improve outcomes if teachers have the skills needed to help diverse learners.

Discipline

Nationwide, students with disabilities are more than twice as likely to be suspended as those without disabilities, and the loss of instructional time increases the risk of academic failure and school aversion. In Oregon students identified with SLD or OHI accounted for **59.4%** of students with disabilities who received out-of-school

suspensions in 2014-2015

State Literacy Laws

Oregon law requires each student to be screened for dyslexia risk factors. It also requires a state dyslexia specialist to develop training opportunities and a plan to provide dyslexia screening and guidance for schools. Each school district must ensure a teacher at each school receives dyslexia training, and educator preparation programs must include instruction on dyslexia.

Oregon does not have a law addressing

reading by third grade, though 38 states in the country do.

Leaving High School

Students with learning and attention issues are as smart as their peers and, with the right support, can achieve at high levels. But too often students with these issues leave school with a certificate of completion—instead of a regular diploma—or drop out altogether. Here's a look at outcomes for students receiving special education in Oregon, where **73.8%** of all students graduated in 2014–2015.
