BACKGROUND:

Daylight saving time is the practice of setting the clock one hour forward for 34 weeks of the year, allowing for more daylight in the evening hours. The United States used daylight saving time at times during World War I and II, with some state and local governments persisting in the practice. The Uniform Time Act of 1966 standardized the practice nationwide, and allowed states to exempt themselves. Hawaii and Arizona, with the exception of the Navajo Nation, do not observe daylight saving time. Measures introduced in Congress, California, and Washington would end the twice-yearly time change and permanently maintain daylight saving time. According to the National Conference of State Legislatures, 26 states have introduced measures ending the practice of twice-yearly time changes.

A 2008 study concluded that the time spent changing clocks represented a \$1.7 billion opportunity cost to the U.S. population. Another study found that daylight saving time costs the U.S. economy more than \$433 million each year in the form of cardiac incidents, workplace injuries in the mining and construction sectors, and "cyberloafing" in office settings. A 2014 study found a 6.3 percent increase in fatal automobile accidents over the six days following the time change.

Senate Joint Memorial 6 A urges Congress to allow states to permanently maintain themselves on daylight saving time.
