---

I oppose the cap and trade bill being lobbied currently. There are too many taxings on the people that make the least money and the most impact at making life function in this state. If there was something that actually had real numbers to compare our environmental impact with and implemented regulation on the current or future polluters regardless of their political contributions or size as well as incentives available to encourage more healthy way to live this might be logical. Either toss it out as written or send it to the voters.
