I'm wanting to voice my concerns with this bill

I'm the General Manager of a manufacturing company here in Salem. We employ 71 people , doing \$16 million a year in sales.

Pioneer Truckweld, INC. We manufacture Truck Bodies and Gravel trailers. We take raw materials, cut them, form them, weld them, paint them, and then install them on customers trucks. If these regs go into effect it will put us out of business.

We are already at a disadvantage due to the gross receipt tax and to add this will be the final blow. I know it has nothing to do with carbon emissions, its all about money. If they are truly concerned about emissions then help businesses not bankrupt them. Even with the misleading calculation of Oregon's carbon out put it does not even move the needle. 0.007% of US carbon emissions. The Dems need to go back to school and review "Insignificant Digit". Destroy Oregon's economy to have zero impact on global carbon output.

Mr. Motes comment that Oregon's plan would make a major difference in global temps is delusional. How about working on real issues. Human trafficking. Oregon ranks 4th nationally. Traffic congestion, drug use, cost of living just to mention a few.

Thank you,
Doug Drader
President / General Manager
