Date: Wednesday, February 5, 2020 11:55:52 AM

While the cap and trade approach of SB 1530 is not as effective an approach as a carbon fee, it is a big improvement over the status quo and offers a path towards directly addressing climate change. The bill also includes accommodations for communities most impacted by the changes which should improve its chances for passage, and it will provide a model for other states to implement as we move towards a national policy to address climate change.
