

Hi,

I'm writing because I'm hoping that the committee will considering not pursuing SB1530. We don't need any additional taxes or regulation in this area and I would hope that our legislature would refer this to the voters if it's really something they believe it.

I'd rather see us adapt changes as a government that could make a real difference. Locally sourcing government supplies and managing our public areas in a way that creates environmental benefits to name just a few.

Thank you,
