Hello,

As a rural Oregonian I would like to urge you to make climate change the highest priority in 2020. If we lose continuity in our climate then our ability to provide food is compromised. What we need is **STRONG** leadership to make a shift towards a sustainable economy and environment. What are we leaving to our children will be a downward spiral that leaves humans without any services, much less food. How does that picture look? Not pretty. You, and others that act now can make history! The history that we did it! We turned climate change around. It will not be easy, but lead the way and the people will follow!! I support a strong Cap and Invest Program which will be a start in the right direction...

Thank you for your time..
Karen Potts
