

Greetings, House Members.

As a resident of Oregon, and our Capital City of Salem, I wanted to express my deep interest in having legislators support HB 4167 for much-needed climate action. This Bill is vital for a sustainable future in Oregon, especially for supporting public utilities and low-income residential customers. As someone who studies energy policy and movements in Puerto Rico, we see the dastardly effects when vital energy and power transformations are delayed or ignored. I also am a professor across the street at Willamette University, and I hear how often my students express anxieties about their futures and also demonstrate their talents and care for our planet and the communities of which they are a part. For them, and because it is the right, ethical thing to do, please support this bill with urgency! Thank you for your time.

Best wishes,

Catalina M. de Onís, PhD
