

There is no time left to delay action on climate change. Every day we fail to act to slow green house gas emissions will result in increasing devastating and costly problems for everyone in the future. We must act now to begin reducing green house gas emissions to the goal of 45% by 2030 to avoid disastrous climate change. The "2030 deadline" does NOT mean we can wait until 2030 to take action.

Cap and Trade is a critical step in reducing green house gases. The Oregon legislature needs to pass HB 4167 this year. Not next session. Not through voter initiative next year.

We cannot allow climate action to be delayed any longer! Pass 4167
