

To all Rules Committee, Oregon House of Representatives,

CO2 makes up between 77% and 84% of greenhouse gasses, known scientific data. This is easily available information. Please study the graph below, over millions of years, and read the conclusions written on this graph. What this shows is that the major component of greenhouse gasses, that being CO2, can not be shown to drive global temperature fluctuations. The fact that the earth is warming is not a function of humanity. Another thing this graph shows is that atmospheric CO2 and global temperature has not been as low as it is now for 300 million years.

All of this known data negates the idea that a reduction in greenhouse gas emissions, by any means, will have an effect on global temperature fluctuations. For these reasons and for the reason that passing HB4167 would have major deleterious effects on all aspects of our historic Oregon lifestyle, I urge you to vote no on this bill.

Thank you,
Sincerely,
Susanne Walters-Moore
Prineville, Crook County, Oregon
