---

Dear Chair Dembrow,

Please understand that The US EPA is the official regulator of all pesticides and they do so using all of the data on each product. The pesticide label is written to protect the workers using the product, nearby agricultural workers, the public, and the environment. I'm sorry, but this is a political attempt to ignore science and the Oregon Legislature is not qualified to do a real risk/benefit analysis.

The bi partisan compromise is a good idea instead of a knee-jerk ban.

Sincerely,

Bruce Alber
