

Raising taxes & fees on new more efficient machines or adding privilege tax to improved technology is counter productive! You basically telling the American/ Oregon population to use old machines and piece them together as long as they can, which is worse for the environment. Years ago the State of Oregon set up a scrap incentive. They paid to have old junker cars and old farm, logging equipment scrapped. This proved to be one of the best clean ups ever! Many took the money and invested in newer equipment or vehicles.

There will always be a need for equipment & vehicles find the incentive to help our State, not nickle and dime it to death!
