

Please please please allow this. It will cut down on traffic. More people will ride motorcycles if given this opportunity. As a female rider, I've found myself so hot that I almost passed out sitting in traffic on a hot day on my motorcycle. The asphalt radiates heat, and most riders wear leather or heavy clothing (to be safe) and a helmet- mine is full face. The motorcycle engine is also emitting a large amount of heat. This makes it extremely dangerous for the rider. I have had to pull over under an overpass just to get shade and get a break in times of heavy traffic. I also had my old motorcycle overheat on several occasions from sitting in traffic. Air cooled engines will do that. Which also required me to pull over. If it's hot out, those conditions can be dangerous to a rider. Additionally, my motorcycle gets 65 mpg, greatly reducing my carbon footprint. Please allow this, other states and other countries do, and there's no great reason not to allow it. Getting heat stroke from being stuck behind a car spewing carbon dioxide in your face is NOT safe.
