

OFRI is clearly an entity taken hostage by the forest industry as multiple sources and news accounts prove. This institute is infiltrated and corrupted by bad actors. Such an institute could do much forward moving good for our climate, Oregon's forest health and wildlife and fisheries. If there is no way to reconstruct this entity in a wholly science based and honest manner to it's purpose- it must be eliminated and reconstructed anew with jaws of steel to stop the brazen, corrupt and much too powerful logging industry of Oregon to control the levers of good government and sound forest stewardship. SCIENCE RULES!
