

Please pay attention to the economic stresses building here in Oregon. Rather than compiling more "green" (so-called) limits, PLEASE URGE "ENERGY INDEPENDENCE"! Gas is already up over 30%, and of course increases in food, clothing, electricity, and whatever else makes life -a comfortable life- possible with go up, too. the Stimulus monies won't cover it. Some say there is great potential for more jobs in green energy, but there's no proof behind the claims. We are already the cleanest nation in the world. Let's keep innovating responsibly. More importantly for the quality of the planet, let's get tougher with the worst offenders! Like China!
