

I oppose this bill.

1- vaccines should NOT be given in school, at all, period. If a parent chooses to get a vaccination it need to include a conversation with the particular child's pediatrician who knows that child's medical history as well as familiar histories.

2- vaccines can cause medical reactions and thus need to be given where there are medically trained staff in case issues arise.

3- because there is a risk of medical complications, vaccinations should only be given by fully trained and licensed medical personnel. Nursing and medical students lack the full knowledge or understanding of the risk/benefit as well as the signs of a reaction and actions to mitigate reactions.

4- when giving any medication or vaccine to a human can cause a reaction the parent should be aware, present and monitoring their own child for changes.
