

Beaver are a vital for Oregon's ecological health, and provide Oregonians with vast positive benefits, including:

oIncreased wildfire resilience (through natural and effective firebreaks and post-fire habitat);

oIncreased water security through wetlands and ponds storing surface and groundwater;

oCarbon capture and storage that helps remove carbon from the atmosphere;

oImproved drinking water quality, quantity and stream temperatures;

oRearing habitat for multiple imperiled salmon species.

•The bill encourages beaver presence on the landscape to create an atmosphere where Oregon sees more benefits from increased, and more widely-distributed beaver populations in Oregon.

•The bill removes the predatory animal status for beaver, which allows Oregon's wildlife experts, the Oregon Department of Fish and Wildlife, to manage beaver everywhere in Oregon as it does for the vast majority of wildlife in Oregon, including deer, elk, black bear, wolves, raccoons, fish, and others.

•The bill encourages the use of non-lethal co-existence tools to prevent beaver-related property and infrastructure damage.

•The bill does not remove any tools from the toolbox for landowners in Oregon, as lethal removal of beaver is still an option.

•The bill returns wildlife management to Oregon's wildlife experts at ODFW, without precluding the Oregon Department of Agriculture from working with landowners to protect their property, crops, and infrastructure.

•I have seen the natural introduction of beavers on the North and mid forks of the John Day River thru tree planting, riparian restoration and removal of rip rap.
